

# JUMBO ASSEMBLER

## LARGE ASSEMBLY

Assembling extra large partitions has never been easier than with Premier's Jumbo Assembler. By feeding partitions through multiple channels, operators can run and maintain production at a pace exceeding that of multiple employees assembling partitions by hand. The Jumbo Assembler's servo drives, accessed through its touch-screen panel, gives you the option to ramp up production speed even further, should your project demand it.

View the machine in action by scanning this QR code with the camera on your phone!

## VERSATILE AND CUSTOMIZABLE

The Jumbo Assembler, like all of Premier's machinery, can be customized to fit your organization's needs. Whether your current production requires hand feed operations, or our autofeeder, Premier has you covered. Our assembly machinery is also extremely versatile and can assemble both corrugated and solid fiber partitions.
