

FULLY AUTOMATIC ASSEMBLER

ULTIMATE SOLID FIBER ASSEMBLER

Premier's Full Automatic Partition Assembler fabricates and assembles box partitions from two fiber chip board rolls. A single operator designates partition specifications on a touch screen, and from there the machine will cut and assemble solid fiber partitions to those specifications. If you are looking to increase automation in your organization, this is the machine you are looking for.

AUTOMATED PRODUCTION

The Feeder Section produces die cut partition strips and inserts them into channels which are conveyed to the assembly section. At the Assembly Section, a paper web with pre-cut slots is automatically inserted into partition strips to fabricate an assembled partition. Finally, the Collapsing Section collapses and batches the assembled partitions into sets.
