

# Lead Edge Feeder for RDC's and FFG's

**SUN**  
AUTOMATION GROUP

With over 6,000 in operation and over 40 OEM users around the world, Sun's **Extend-O-Feed®** is the world standard lead edge feeder.

## **Run Faster**

Most stock can be fed at full machine speed.

## **Fewer Jams**

Since **Extend-O-Feed** can feed the most difficult stock without jams, uptime and productivity are greatly increased.

## **Quicker Set-ups**

With less critical operator adjustments needed, set-ups are faster and easier.

## **Minimum Maintenance**

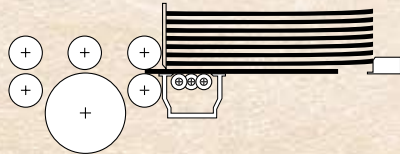

Less maintenance than any other feed system.

**Extend-O-Feed®**

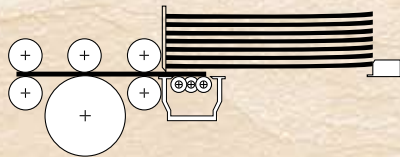

## Lead Edge Feeder for RDC's and FFG's

### How does Extend-O-Feed work?

All other feeders stop feeding here, causing excessive feed roll grip (crush) in order to remove the sheet from the stack.

Extend-O-Feed® continues to feed over nearly the full width of the sheet. This minimizes the grip (crush) required by the feed rolls in order to pull the sheet from the stack.

### ROI Considerations

| FACTOR       | QUANTIFIABLE BENEFIT   |
|--------------|--|
| Scrap        | Sheets lost to jams reduced at least 80%   |
| Productivity | Increase throughput 16%, much more on difficult stock like thin flute and warp, due to fewer stops for jams and higher run speed |
| Maintenance  | Less down time and repair costs. Routine maintenance limited to changing wheel treads and checking oil                           |
