

Soft Anvil Conversion Kit

- ▶ Quick and easy to install
- ▶ Reduce maintenance and down time
- ▶ Protect your machine
- ▶ Reduce total cost of ownership

OEM steel anvil glue tab cutting systems utilize an expensive glue tab blade. This blade must be precisely adjusted to avoid excessive loading on the lower anvil ring. Improper setting results in premature wear on lower and upper shaft components.

The Sauer System soft anvil system replaces steel-to-steel cutting while reducing the total cost of ownership.

Installing the system is quick and easy. Replacing tab knives, covers, and the 3/32" blade when needed will maintain the system. The replacement cost for these items is far less than the steel system components. The soft anvil system is designed to provide years of trouble-free service.

The conversion kit includes:

- ▶ A slot anvil ring with a polyurethane cover
- ▶ A 3/32" blade
- ▶ Tab knife holders with clamp blocks and knives

Spare tab knives, covers, and blades are kept in stock for quick reorder

▶ Available for all major brands of machines that utilize a hard anvil system

Sauer System...

Stitch Lap Knives

The Stitch Lap Knife is one of the most basic components in the Sauer System. Our knife has several unique features that we feel provide a much greater value for the boxmaker.

There are 5 major reasons that we have the best knife in the business!

1. **Our knife has a beveled edge notch that performs a pinch cut** against the 3/32 blade. Competitors' blades have a flat notch that provides a smash and tear operation rather than a cleaner cut.
2. **The height of the beveled edge is precisely controlled** to provide a thorough metal to metal cutting action and better eliminate the hanging tab.
3. **Our knives have a tapered edge** so that they can be mounted flush against the male slotting punch without a gap. By eliminating this gap, our left and right handed designs allow our knives to more completely cut the tab from the box.
4. **Our unique 8 tooth design allows for minimal cutting pressure and precise cutting depth** into the anvil surface providing for a cleaner cut.
5. **Our knives are fully hardened to a minimum of 40 Rc.** Harder knives last longer and provide greater value.

Our most popular knives are conveniently packaged in kits that contain 25 left handed and 25 right handed knives.

We put this same degree of detail in the design of all of our products. The Sauer System helps you make the perfect box because of the precision and quality of our products. Whether it be a T-Slot head, an anvil, a polyurethane cover, a hand hole cutting die, a pull roll, or a stitch lap knife, you can be assured that we are offering the finest quality products that are the best engineered in our industry.
