

# Sauer System T-Slot Heads and Anvils

Achieve die cutting on your press without a die cut section.  
Sauer heads mount on your slotting shafts and accept a wide range of attachments

T-Slot head

Sauer System T-Slot heads and anvils allow for a flexible system of rotary die cutting on printer-slotters and flexo folder-glueers.

Quick setups are assured by Sauer System's Kam-Lok mechanism which allows for easy installation, removal, and repositioning of the heads. Heads can be repositioned on the shaft with just one quarter turn of a locking screw.

T-Slot heads and anvils are manufactured from the finest heat-treated aluminum and are available in a variety of widths.

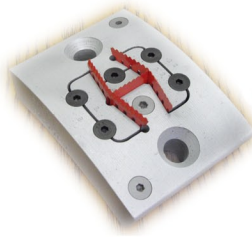

Anvil

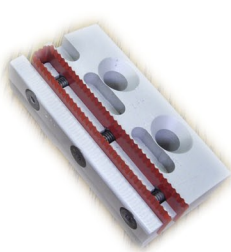

## Aluminum dies

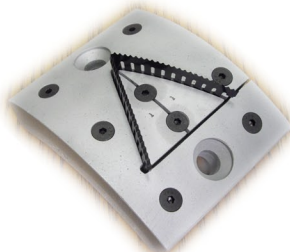

Hand hole and vent hole cuts:

Tear tape cuts

End slot cuts

Special cutouts

A wide variety of aluminum dies are available to fit Sauer System T-Slot heads.

Basic holder packages include hand hole and vent hole holders, available in horizontal, vertical, and combination configurations.

Tear tape holders are available in a number of styles.

Sauer also manufactures a system of end slot and corner cut holders that can be used to cut five-panel-folders.

Finally, special holders can be designed to meet specific requirements.
