SERRATED MALE SLOTTERS

Recycled paper is very difficult to slot with conventional slotters.

Zenith Cutter serrated male slotters provide cleaner slots and much longer life.

Today's increased use of recycled paper has created serious slotting problems. The short fibers found in recycled paper are more difficult to shear, and create unacceptable slots with conventional slotting blades.

To solve these problems Zenith Cutter Company proudly introduces the newest of our innovative products for the corrugated industry – the Serrated Male Slotter*. Our unique, offset serrated tooth design creates two major improvements over conventional male slotters – cleaner slots and longer blade life.

Our patented* manufacturing process creates a continuous super sharp serrated cutting edge. This unique edge both perforates the corrugated board and cleanly shears the shorter fibers found in recycled paper. This edge has been found to last 2 to 4 times longer than conventional male slotting blades.

The increased practice of running “hot” board immediately off of the corrugator and straight to the press has also made producing clean slots more difficult. Zenith Serrated Male Slotters produce clean slots in corrugated board that is hot and has high moisture content.

Zenith Serrated Male Slotters can be used with standard female slotters – no modifications are required.

Zenith Serrated Male Slotters are available in selected sizes for all makes of printer/slotters and folder/glue.

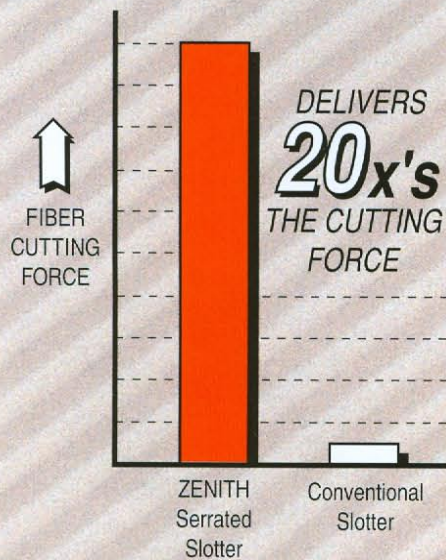

QUALITY DESIGN FEATURES

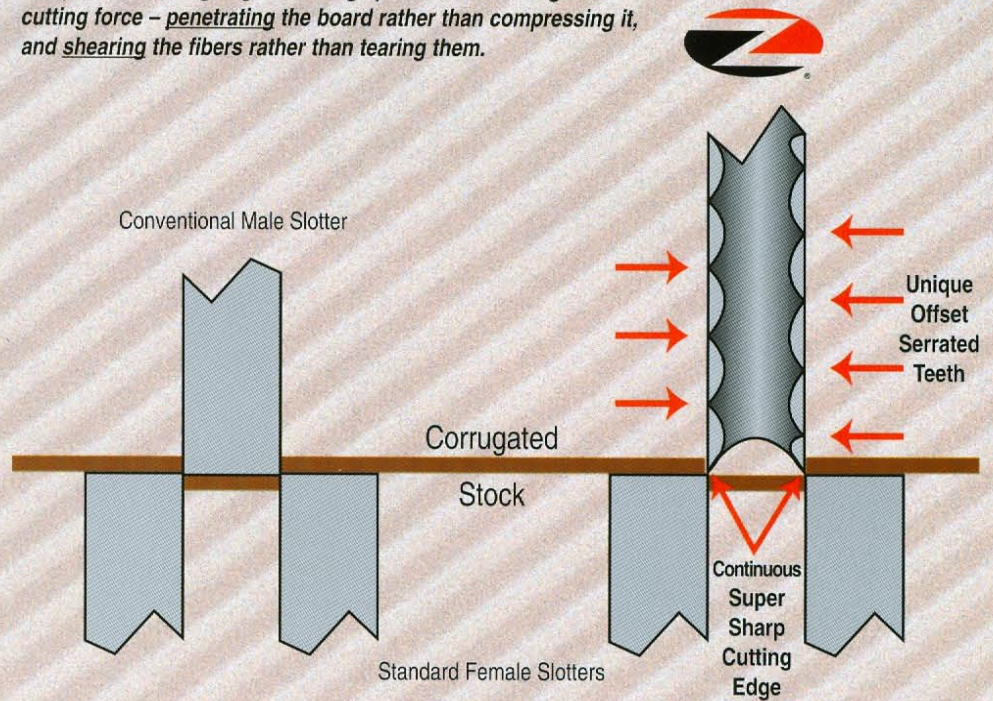

Only Zenith Cutter Company has the unique, offset serrated design. This design is a major improvement over conventional male slotters. Our patented* manufacturing process creates **a continuous super sharp serrated cutting edge**. The conventional male slotter produces inferior results when working with recycled, short fiber paper.

HERE'S WHY IT WORKS

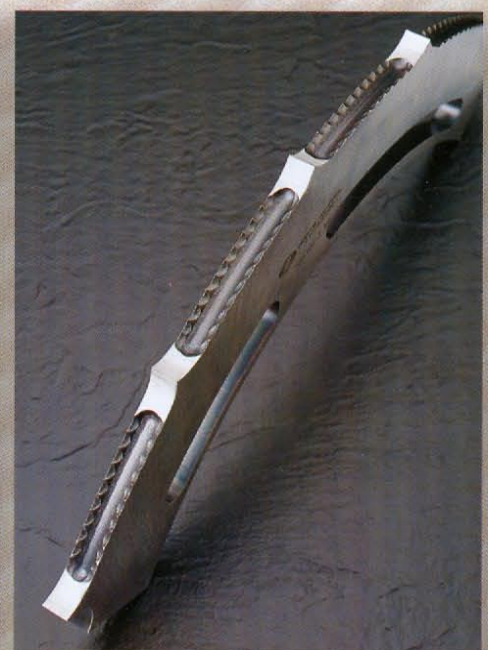

Serrated Male Slotters Provide Superior Cutting Force

Zenith's unique offset serrated tooth design creates a continuous, sharp, acute cutting edge. This edge produces a much greater cutting force – penetrating the board rather than compressing it, and shearing the fibers rather than tearing them.

THE RIGHT SLOTTER FOR THE JOB

Serrated Male Slotters are ideal for most every day jobs. They provide a clean finished look to your corrugated slot. Serrated male slotters outlast conventional slotters by up to four times.

Serrated Male Skip Slotters are the perfect tool for high quality specialty box manufacturing.

Special Serrated Male Slotters can be manufactured to solve your unique slotting requirements.

TIPPED LEAD SLOTTERS

Tipped Male Slotters with optional serrated teeth ensure complete slot scrap removal at the corrugator score line.
